

Molecular Microbial Bioengineering Lab

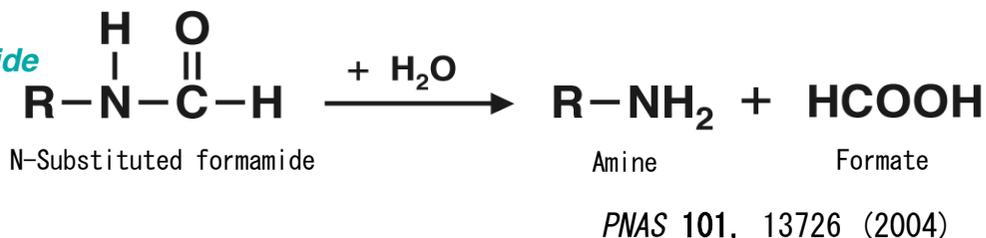

Faculty : Prof. Michihiko Kobayashi, and Assistant Prof. Yoshiteru Hashimoto

Discovery of novel enzymes (with each new E.C. number)

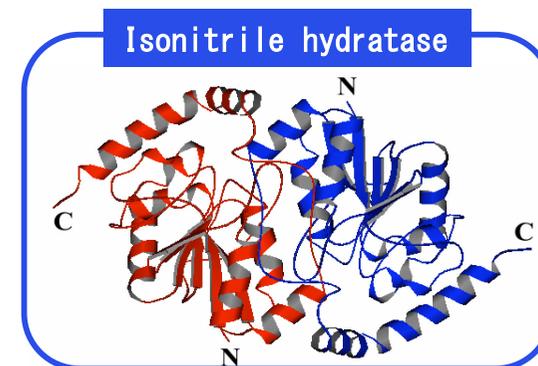

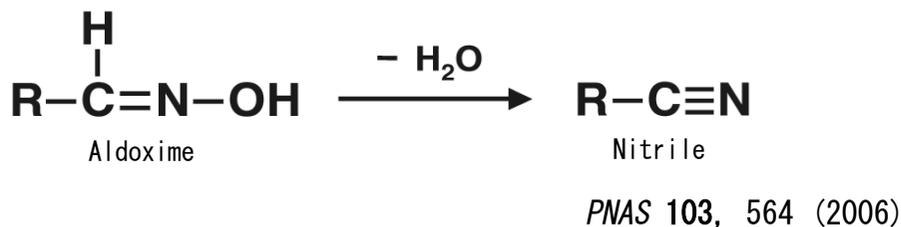

Isonitrile Hydratase
(EC 4.2.1.103)

N-Substituted formamide deformylase
(EC 3.5.1.91)

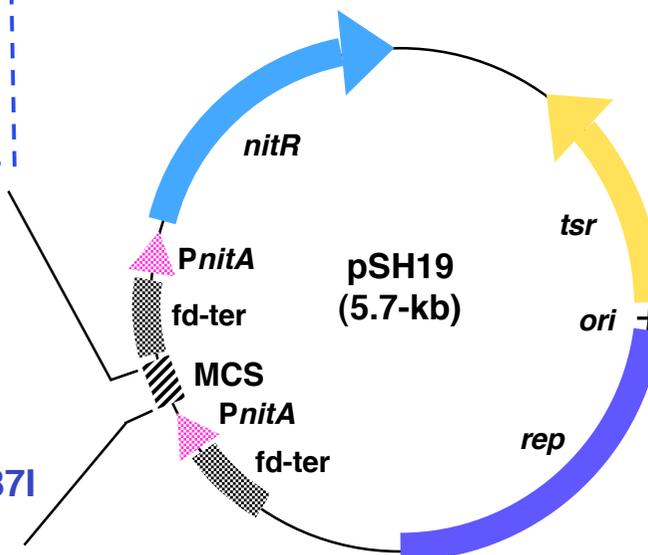

Aliphatic aldoxime dehydratase
(EC 4.99.1.5)

Expression vector for *Streptomyces* *PNAS* 101, 14031 (2004)

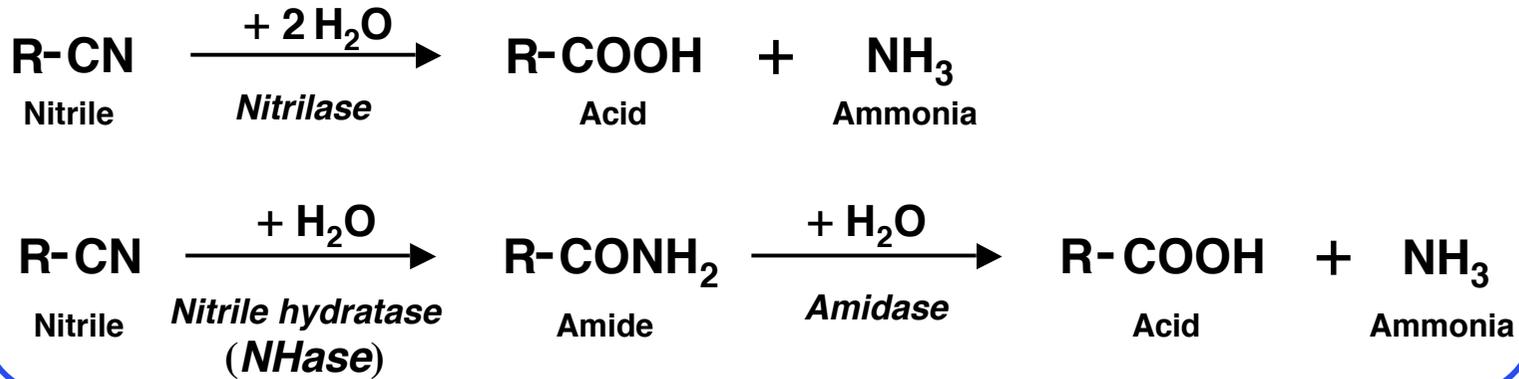

- *Eco* RI
- *Sac* I
- *Kpn* I
- *Bam* HI
- *Xba* I
- *Pst* I
- *Sse* 8387I
- *Hin* dIII

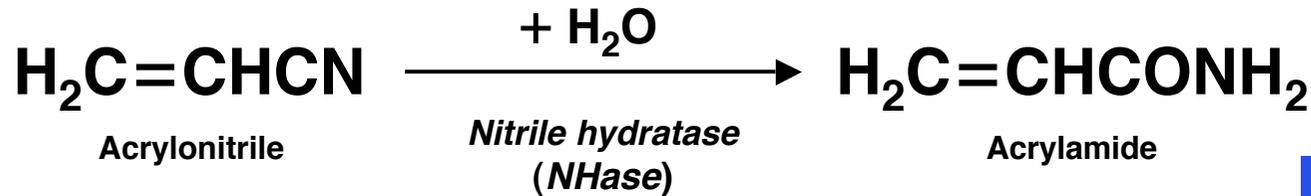

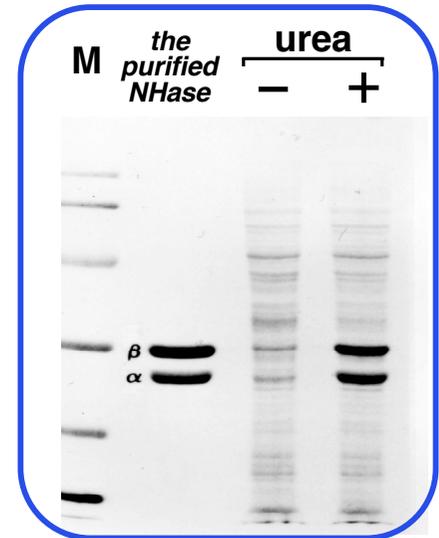

Strategy :

- (1) Screening of microorganisms with a novel enzyme
- (2) Analysis of the microbial metabolism and the enzyme function
- (3) Biotransformation by the enzyme or cells
- (4) Analysis of the regulation mechanism of the enzyme expression
- (5) Development of an expression system using the enzyme gene promoter

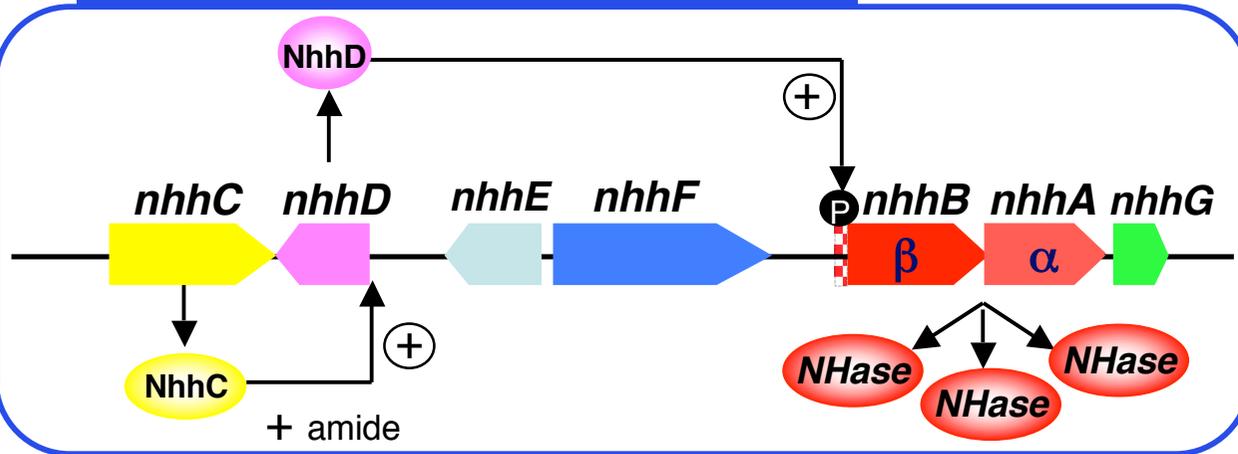

Two pathways for nitrile metabolism in microorganisms

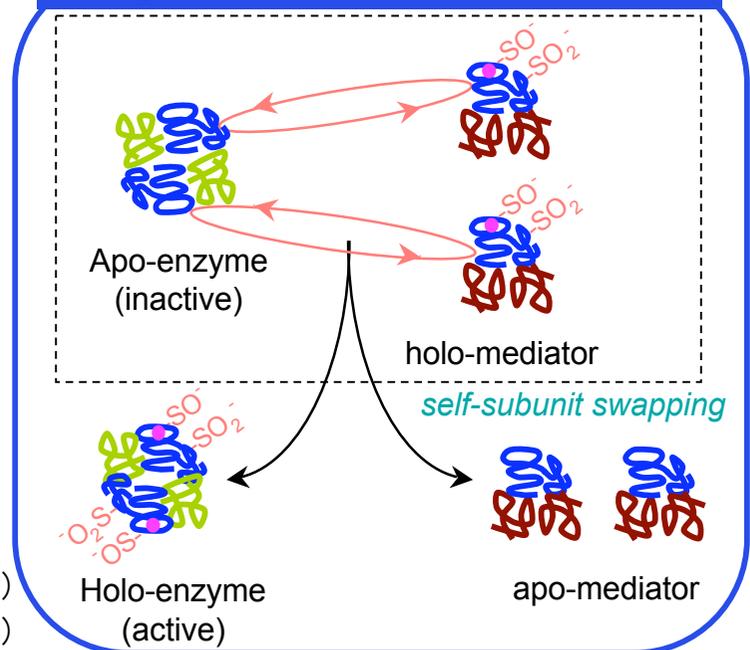

Overproduction of NHase of urea-induced cultured *Rhodococcus rhodochrous* J1

Unique nitrile hydratase expression mechanism

Discovery of "self-subunit swapping" novel post-translational modification mechanism

PNAS 105, 14849 (2008)
 JBC 284, 14930 (2009)
